15 June 1959

MEMORANDUM FOR: Deputy Director (Intelligence)

SUBJECT: PIC Space Requirements for New CIA Building

1. In reviewing the plans of the Photographic Intelligence Center for the provision of necessary photographic intelligence support to Agency components, we have concluded that it is highly advisable to provide minimum space for this activity in the new CIA Building at Langley, Virginia. This space will be required in order to perform a centralized requirements service to coordinate and funnel requests for photographic intelligence support to the PIC. In addition, we will require a small working area in which to perform immediate photographic intelligence support to Agency components, which have consistently looked to this Center to perform services in support of their missions. Provision should also be made for a special viewing and briefing laboratory in which to house sensitive photographic intelligence equipment, graphic displays and specially security controlled materials. This area would serve both as a work and special briefing area.

2. Attached for your information and use is the detailed listing of these space requirements. This plan, which calls for the detailing of 15 people in approximately 2,000 square feet of space, is considered minimal in order to carry out an operation of this kind in the new building. It is requested that present space plans for the new building be amended to include these requirements.

ARTHUR C. LUNDAHL  
Director

Photographic Intelligence Center
